

NADJA DJORDAN

Novi Sad, Serbia

nadjadj1908@gmail.com ♦ github.com/nadja1908

EDUCATION

Delft University of Technology (TU Delft), Delft, Netherlands Master's Degree in Management of Technology	Sep 2026 – Present
Faculty of Technical Sciences, Novi Sad, Serbia Bachelor's Degree in Information Engineering	2021 – 2026 GPA: 8.56
Gymnasium "Svetozar Marković", Novi Sad, Serbia Gymnasium	2017 – 2021

CERTIFICATIONS

Cambridge English Qualification (C1 Advanced)

SKILLS

Programming Languages	C++, C#, Java, JavaScript, SQL, Python, HTML, CSS, React
Frameworks & Tools	Spring Framework, Spring Boot, Spring Data JPA, Hibernate, Git, GitHub, Postman, Maven, Docker, Jira, VS Code, IntelliJ IDEA, Excel, PowerPoint, Word
Databases	PostgreSQL, MySQL, Oracle Database, MongoDB, Cassandra
Documentation	LaTeX
Other Skills	REST API Development, Responsive Web Design, OOP, NoSQL Data Modeling, ETL (Node.js)

EXPERIENCE

Marketing Intern, Marketing Service - Faculty of Technical Sciences Novi Sad, Serbia	2021 – 2024
- Supported organization-wide marketing activities for the faculty. - Contributed to project goals and collaborated closely with team members.	
Intern - ComData d.o.o (App Daily Planner)	June 2025
- Developed a full-stack daily planner application during a one-month internship. - Built backend using C# .NET and frontend using React.js.	
Frontend Developer - Oksa d.o.o	Aug 2024 – Dec 2024
- Developed the front-end of the official company website for OKSA d.o.o. - Focused on responsive layout, clean UI design, and user-friendly navigation using HTML/CSS. - Used minimal JavaScript for simple interactive elements (button clicks, basic dynamic behavior).	

PROJECTS

Prediction of Heart Failure (Logistic Regression)

- Built a logistic regression model to predict heart failure likelihood.

- Performed preprocessing, feature selection, and evaluation using Python (pandas, scikit-learn).

Diabetes Prediction Using Machine Learning Algorithms

- Trained and compared models: logistic regression, linear regression, random forest, decision tree, SVM.
- Conducted preprocessing and evaluation (accuracy, precision, recall).
- Used Python with pandas, NumPy, scikit-learn, TensorFlow, matplotlib, seaborn for analysis and visualization.

OnlyBuns - Social Network for Rabbit Lovers

- Developed a web app for sharing and exploring rabbit photos with features like liking, commenting, following, and admin account management.
- Built using Vue.js (frontend) and Node.js (backend).

Tablet Application - “Booking”

- Implemented backend logic in C# and created UI/viewmodel layer using HTML.

Veterinary Clinic Management Application

- Full-stack application: Java Spring Boot backend, React frontend, PostgreSQL database.
- Implemented features for patients, appointments, medical reports, price lists, and promotional packages.
- Used Jira for sprint planning, task tracking, and workflow organization.

Faculty Information System - Student Performance & Course Analytics (Microservices)

- Developed a microservices-based system for analyzing student success and course statistics.
- Enabled insights such as course difficulty and grading patterns across professors through aggregated analytics.
- Worked with Apache Cassandra (NoSQL) for data storage and implemented features end-to-end.
- Implemented inter-service communication between two microservices to support data exchange and integration.

BoardGameGeek Dataset Analytics - MongoDB Aggregations & Query Optimization

- Built analytics using MongoDB over a large Kaggle dataset (BoardGameGeek).
- Implemented five aggregation-based analytical queries/functions to extract insights.
- Optimized queries using indexes and efficient patterns for high-volume data.
